- ✓ Up to 3 meters fall height
- ✓ Easy and quick installation with click system
- ✓ 92% recycled material
- ✓ Long durability

CREATING SAFER PLAYGROUNDS, SUSTAINABLY

Our unique PlayNsafe rubber grass mats have been developed in Denmark through close collaboration with consultants, landscape contractors, maintenance teams, and playground equipment manufacturers. The result is a product with an uncompromising focus on quality, designed to make everyday work easier for those involved in playground installations.

Creating safe playgrounds where children can explore, play, and grow has always been our passion. A key part of this philosophy is ensuring that our products not only meet the **highest safety standards** but also fulfill requirements for sustainability and **long-term durability**.

The mats are designed for **quick and easy installation**. Their innovative interlocking system ensures that the mats stay securely in place without shifting. This **reduces installation time and enhances safety**—something both installers and customers greatly appreciate. Additionally, the modular design allows for individual parts to be replaced, resulting in **noticeable savings on maintenance costs**.

To support the circular economy and reduce waste, the product is made from 92% recycled tire granulate. This makes the mats a natural choice for those who want to combine safety with environmental responsibility—**for the benefit of both the planet and the community**.

Moreover, the safety surfacing is approved for grass growth, creating a green and vibrant appearance that is not only visually appealing but also **promotes healthy biodiversity**.

- ✓ Promotes biodiversity – allows grass to grow through
- ✓ Up to 3 meters fall height
- ✓ Easy and quick installation with click system
- ✓ 92% recycled material
- ✓ Long durability

FAST AND HASSLE-FREE INSTALLATION

Recommended fall height for a 45 mm mat is 1.6 m.

Recommended fall height for a 65 mm mat is 2.3 m.

When combining 65 mm and 45 mm mats, a fall height of 3 m can be achieved.

Installation

PlayNsafe impact-absorbing surfaces can be installed in three ways: recessed into the ground, on top of the ground with buried edges, or on top of the ground with a raised soil edge. All options ensure stability and a harmonious appearance.

We always recommend grass, screened topsoil, or washed sand/gravel as the base layer.

Maintenance

Every 3 months

Fill in gaps and edges.

Annually

Check stability.

Assess fall height.

Every 3–4 years

Check whether the mats remain stable or need to be relaid, and refill with screened topsoil or washed gravel to maintain functionality.

Refer to the maintenance guide for more details.

SMART, SAFE, AND SUSTAINABLE SURFACING

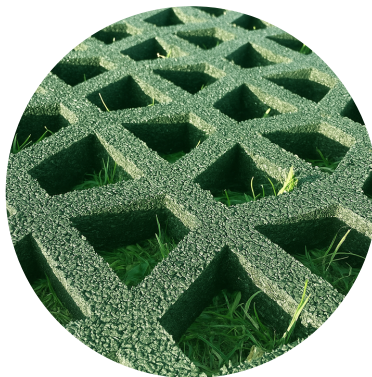

PlayNsafe mats are quick to install and easy to adapt. They can even be laid directly onto a prepared surface. The unique interlocking system prevents shifting and unevenness, ensuring a stable and secure installation.

Our mats are made from 92% recycled tire granulate and can be recycled 1:1.

The surface can easily be concealed, as it is approved for grass to grow through – benefiting biodiversity.

The mats are available in two colors, green and black, and in two heights.

The surface is even and firm, making it suitable for wheelchairs and ensuring accessibility for everyone.

The mats are highly durable, come with a 5-year warranty, and are certified by the Nordic Playground Institute.
