

- ✓ Promotes biodiversity – allows grass to grow through
- ✓ Up to 3 meters fall height
- ✓ Easy and quick installation with click system
- ✓ 92% recycled material
- ✓ Long durability

MAINTENANCE GUIDE

Daily

Remove any loose items such as stones, branches, litter, or other objects that children could trip over or get hurt by. Look for visible damage such as cracks, worn-out areas, or sunken spots.

Quarterly

Check whether any material is missing from the holes, and make sure the edges are covered and refilled.

Remove or trim any unwanted weeds to keep the area even and safe. The mats can withstand being driven over by a lawnmower weighing up to 800 kg.

Yearly

Make sure the mats are stable and assess whether they still meet the requirements for the specified fall height.

Every 3-4 years

Check if the mats are uneven or heavily overgrown. If so, they should be relaid, and the gaps refilled with fresh screened topsoil or washed gravel to maintain functionality and safety.
